Applicant thanks the Examiner for the thorough examination of this case and for the detailed application of the prior art to the pending claims. Applicant has elected to amend claim 4 to clearly distinguish from the cited art and/or any combination thereof. Notably, claim 4 now recites that the groove is made in two steps. Claim 4 further recites:

first step of roughly cutting the groove on the outer surface of the workpiece using a tool having an end mill and a round end mill, and a second step of shaving the left, right and bottom surfaces of the groove, wherein a shaving bit having two blades set at different angles is used for shaving the left surface and right surface, respectively, and a round bit is used for shaving the bottom surface
